

REDINGER 360 RISK MANAGEMENT SYSTEM™

- SEE EMERGING RISKS
- INTEGRATE EXISTING SYSTEMS
- STRENGTHEN ORGANIZATIONAL HEALTH

REDINGER 360 RISK MANAGEMENT SYSTEM (R360-RMS)

This is the risk management system you have been looking for—one that addresses today’s challenges and integrates your existing risk management systems.

R360-RMS integrates existing risk management systems with three areas necessary to manage risk in today’s organizations—systems thinking, organizational learning, and living systems concepts. The result is a risk-based management system that optimizes resilience and business continuity giving your organization a clear competitive advantage.

STANDARD RMS INPUTS		R360-RMS ADDITIONS			R360 RISK MANAGEMENT SYSTEM

Plan	Planning, Support	Systems and Structures		Recognition	▶ PLANNING
Do, Implementation Operation	Operation	Personal Mastery		Control	▶ IMPLEMENTATION
Check	Performance Evaluation	Feedback		Evaluation, Confirmation	▶ EVALUATION
Act, Management Review	Improvement		Seeing Systems		▶ REFLECTION AND RENEWAL

RISK MANAGEMENT IN THE 21ST CENTURY

Risk management is central to business continuity and organizational health. Increasing business complexity in the 21st century requires a broad risk perspective—one that looks beyond traditional financial risk management and insurance considerations, and takes into account environmental, cultural, and human factors. Challenges to developing risk management frameworks that provide confidence include:

- Building an organization-wide view of risks
- Knowing supply-chain and strategic partner risks
- Breaking down organizational silos
- Anticipating operational and reputational risks from shrinking product cycles
- Unknown risks associated with evolving sustainability reporting

ORGANIZATIONAL HEALTH = An organization’s ability to flourish

THE REDINGER 360 SOLUTION

The Redinger 360 Risk Management System assists organizations to anticipate and proactively respond to emerging risks. With an emphasis on “seeing” systems, scenario planning, blind spot exercises, and strengthening communication systems/skills, R360-RMS will put you in a stronger position to protect your organizational value through timely responses to social business, sustainability, EHS, supply-chain, and other risk shocks. The R360-RMS platform is compatible with existing ISO-based management systems, in fact, it provides a way to unify them into one robust risk management system.

BUSINESS CONTINUITY = Maintaining an organization’s sustainability and resilience

THE R360-RMS ADVANTAGE

The Redinger 360 Risk Management System includes three sections devoted to organizational learning, systems thinking, and living systems concepts—Awareness, Context, and Renewal. Typically addressed elsewhere, their inclusion in R360-RMS creates a risk management solution that addresses the risk factors faced by today’s complex organizations, builds a risk-resilient culture, and increases C-Suite and Board confidence in business continuity and organizational health.

REDINGER 360 SIGNATURE INITIATIVES

360 Risk Management Check-Up™

The 360 Risk Management Check-Up is a proactive, high-level risk management diagnostic, used to assess risk management, EHS/S, and internal audit health. The Check-Up™ identifies weaknesses, provides data, and recommends actions and strategies—enabling organizations to strengthen business continuity assurance. Potential benefits are reduced non-financial risk, reduced insurance and operating costs, increased stakeholder confidence, and increased peace of mind.

360 Perspective Infusion

The 360 Perspective Infusion is a three-day on-site workshop that strengthens organizational-learning and systems-thinking skills for risk management, internal audit, business continuity, and EHS/S professionals.

The workshop presents learning concepts within a risk management context. Participants are assigned individual and team projects designed to reinforce and practice workshop materials. Day 1 starts in the afternoon to allow for morning inbound travel;

Day 2 is a full-day working session; and Day 3 ends in the early afternoon to accommodate return travel. Two 90-minute follow-up web-based sessions are included for reinforcement and project discussion.

This is a recommended starting point for organizations and teams that want or need to improve risk management performance and overall organizational health. It's ideal as preparation for an annual strategic planning meeting, or when team dynamics/energy may be low after a significant event, merger, or downsizing.

360 Strategic Planning

Facilitation of the risk management function's annual strategic planning meeting, structured around existing strategic planning practices. In the absence of existing practices, a two- to three-day approach is recommended. Pre-meeting calls are conducted with the strategic planning team members and data are collected from Stakeholder Domains. Strategic plan execution support is provided as needed.

360 Audit Program Tune-Up

Alignment of the performance measurement and audit practices with the risk management function's systems and aspirations. Tune-up specifics are dependent upon the current performance level. Rudimentary performance measurement practices may be needed. When the audit practices are mature and evolved, Redinger 360 helps fine-tune them to use as an integral component of a 360 risk management department.

360 Annual Meetings

This service introduces a 360 Perspective approach to the entire risk management function at its annual internal meeting. Assistance with meeting design, including plenary and breakout sessions, is provided. A keynote presentation is offered to kick off the event. As needed, assistance with material content is provided.

ABOUT REDINGER 360

Redinger 360 consults with senior executives to improve their companies' competitive advantage, providing them with clear strategies and procedures for business continuity and business sustainability, integrated throughout the organization. We offer assessment, analysis, and strategic planning tools for risk management, sustainability, EHS, and internal audit functions.

At Redinger 360, we know that many organizations have the tools to foresee and avoid disastrous events. Yet, 360 risk management and business continuity planning often overlooks existing resources that are siloed in compliance-oriented areas. We help corporations apply the metrics and systems that they've developed within their individual departments to enterprise-wide risk management.
